

THE BEST GAMES

for your online casino

We are offering **more than 250 awesome games** that will be played by your casino clients.

All our **games are developed for HTML5 technology**, and have both a desktop version and a mobile version, which is specially adapted for comfortable use on mobile devices.

Our games **don't use** the outdated Adobe Flash technology, which will disappear by the end of 2020.

Our employee's average experience in gambling industry is **more than 10 years**. Thanks to our big industry experience, we have a good understanding of the work we do, and we are trying to do our job as good as possible.

Currently, **our platform is processing more than 100 million requests** (game transactions, game plays) per month, which demonstrates the interest in our games both from players and partners.

At the current load, we have only about 30 support tickets a month and this demonstrates the high stability of our system.

We use **original mathematics and logic**. Almost all games use unique mathematics, or much more rarely, maximally similar to the original one.

We constantly run **A/B tests on a focus group** of experienced players, and we use these results to improve the mathematical models in our games. In addition, most players are very complimentary about the mechanics, logic, and mathematics of our games.

All our games, with the exception of table games, support such an important tool as **Freespins**. Freespins are completely free and can be integrated by Api completely transparently into your system.

High customizability. You can customize the bets and denominations for each game.

Resistance to crashes. In the case of a connection failure, the game will automatically be restored from the same place where it was interrupted. Moreover, there is no limit on the time period during which the saved state of the game will be valid.

Multiple currencies support. Our games support more than 100 currencies and cryptocurrencies.

Regular addition of new games. Our company regularly adds new games, on average 2-5 games a month, providing you with additional opportunities and information to keep your players and reminding them about you.

System stability. Currently our games are available in approximately 30+ online casinos and several room systems, working on the territory of CIS and outside of it.

We highly care about the success of our clients and we are ready to hear feedback and make efforts to implement it by adding new games or expanding the system functionality.

Even if you are not ready to work with us right now for some reason, we will be very grateful if you **join our Telegram Channel**  **@b2bslotscom** to be kept updated with our news.

We are a relatively small team of specialists, professionally engaged in online gambling software development. We have been in the gambling industry for over 10 years.

In the beginning, we were focused on landbased products such as downloadable apps.

But with time we have realized that the best development opportunities are in the online projects industry. And after a few years of hard work we've managed to create a highly competitive product for online casinos which we constantly develop and work on to improve.
